

# Balance Waage

## A Wide Selection of Balances for Various Purposes and Capacities

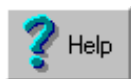

### *Optional Accessory to Test Machines*

In conjunction with our range of mechanical testing systems (e.g. GFT2000) it is often required to make a number of additional measurements - such as weight, thickness, length, width etc.

These measurements can be performed automatically by the use of our customized measuring systems, which will be interfaced directly to our mechanical testing system and the connected PC. As an option they can also be supplied with their own interface and PC.

The pictures above are example of a precision balances. By the use of the interface to TRAM-QA weight measurements can directly be transferred to the TRAM-QA software for further processing - e.g. calculation of density.

For realization of special customized wishes contact TRAM.

## QUALITY ASSURANCE

# Specification

## Example Specifications

MODEL	INTERFACES BETWEEN TRAM-QA AND MOST METTLER BALANCES ARE AVAILABLE.	
	METTLER SB8000	DECKMATE
Maximum Capacity	8 kg	1500 kg
Readability	1 g	0.2 kg
Interface	RS232 to the PC and an interface to the TRAM-QA software.	

Specifications are subject to change without notice.

This accessory offers a great opportunity to improve **quality management** through instantaneous data generation. In spite of the highly advances and automatic testing procedure operation is easy.

Please contact TRAM or your local distributor for additional information.
